

2022 年 11 月 CATTI 三级笔译实务真题 (汉译英) 前半部分:

随着经济社会发展和物质消费水平大幅提高,我国生活垃圾产生量迅速增长,环境隐患日益突出,已经成为新型城镇化发展的制约因素。实施生活垃圾分类(garbage, sorting),可以有效改善城乡环境,促进资源回收利用,提高城镇化质量。垃圾分类是处置垃圾的首要环节,是解决垃圾出路问题的一个重要举措。垃圾分类是按照垃圾的不同成分、利用价值以及对环境的影响,根据不同处置方式的要求,分成若干种类,进行分类投放,并通过分类收集,分类运输,分类处理,实现垃圾减量化,资源化,无害化。

一、逐句翻译:

句子 1: 随着经济社会发展和物质消费水平大幅提高,我国生活垃圾产生量迅速增长,环境隐患日益突出,已经成为新型城镇化发展的制约因素。

1. ...提高/增长:

- 1) Enhance (提高): Taking language classes can enhance your communication skills.
- 2) Improve (改进): Regular exercise can improve your overall health and well-being.
- 3) Boost (增强): Adding more fruits and vegetables to your diet can help boost your immune system.
- 4) Develop (发展): Reading regularly can help develop your vocabulary and comprehension skills.
- 5) Strengthen (加强): Practicing mindfulness meditation can strengthen your mental resilience.
- 6) Increase (增加): Drinking plenty of water can help increase your energy levels.
- 7) Heighten (提高): The new training program aims to heighten employees' awareness of cybersecurity threats.
- 8) Expand (扩展): Studying abroad can expand your cultural knowledge and understanding.
- 9) Advance (前进): Learning new technological skills can advance your career prospects.
- 10) Augment (增加): Adding strength training to your fitness routine can augment muscle growth.

2. 经济社会发展:

- | | |
|---|--|
| 1) Socioeconomic development | 6) Enhancement of economic and social conditions |
| 2) Economic and societal progress | 7) Progress in economic and social spheres |
| 3) Development of the economy and society | 8) Socioeconomic advancement |
| 4) Advancement of the economy and society | 9) Economic and societal development |
| 5) Growth in the economy and society | 10) Economic and social development |

3. 物质消费水平:

- | | |
|---------------------------------------|--|
| 1) Material consumption level | 6) Index of material consumption |
| 2) Level of material consumption | 7) Materialistic living standard |
| 3) Materialistic consumption standard | 8) Living standard based on material consumption |
| 4) Standard of material consumption | 9) Material wealth index |
| 5) Materialistic lifestyle index | 10) Index of materialistic wealth |

4. 生活垃圾生产量:

- | | |
|---|--|
| 1) Household waste generation | 6) Volume of household rubbish generated |
| 2) Amount of household garbage produced | 7) Household waste generation rate |
| 3) Domestic waste output | 8) Rate of domestic garbage production |
| 4) Quantity of household refuse generated | 9) Household waste disposal amount |
| 5) Residential trash production | 10) Total household waste generated |

5. 环境隐患

- | | |
|--------------------------|----------------------------------|
| 1) Environmental hazards | 6) Ecological hazards |
| 2) Environmental risks | 7) Environmental vulnerabilities |
| 3) Ecological threats | 8) Environmental challenges |
| 4) Environmental dangers | 9) Ecological risks |
| 5) Environmental perils | 10) Environmental concerns |

6. 日益突出

- 1) Increasingly pronounced: The impact of climate change is becoming increasingly pronounced, with more frequent extreme weather events.
- 2) Growing prominence: Renewable energy sources are gaining growing prominence in the global energy market.
- 3) Escalating significance: The escalating significance of cybersecurity threats poses a major challenge to organizations worldwide.
- 4) Mounting importance: Public awareness of environmental conservation is of mounting importance as we face ecological crises.
- 5) Rising prominence: Artificial intelligence is gaining rising prominence in various industries, revolutionizing how we work and live.
- 6) Heightened visibility: Social media has provided activists with a platform of heightened visibility to raise awareness about social issues.
- 7) Augmented prominence: With the rise of remote work, the importance of digital collaboration tools has been augmented.
- 8) Enhanced significance: The COVID-19 pandemic has underscored the enhanced significance of healthcare systems and public health infrastructure.
- 9) Intensified focus: Governments around the world have intensified their focus on renewable energy solutions to combat climate change.
- 10) Amplified importance: Digital literacy has gained amplified importance in the era of online education and remote work.

7. 新型城镇化发展

- | | |
|---------------------------------------|---|
| 1) New urbanization development | 6) Advanced urban development |
| 2) Modern urbanization progress | 7) Progressive urbanization initiatives |
| 3) Urban renewal and development | 8) Innovative urbanization strategies |
| 4) Contemporary urbanization growth | 9) Smart urbanization projects |
| 5) Urban transformation and expansion | 10) Sustainable urbanization efforts |

8. 制约因素

- | | |
|-------------------------|-------------------------|
| 1) Constraining factors | 3) Inhibiting factors |
| 2) Limiting factors | 4) Restrictive elements |

- 5) Impeding factors
- 6) Constricting variables
- 7) Deterrents

- 8) Hindering elements
- 9) Obstructive factors
- 10) Bottlenecks

请结合上面的词句进行翻译, 并誊抄在下方的横线上: _____

句子 2: 实施生活垃圾分类(garbage, sorting), 可以有效改善城乡环境, 促进资源回收利用, 提高城镇化质量。

1. 有效改善城乡环境:

- 1) Enhancing urban and rural environments: Implementing green initiatives is crucial for enhancing urban and rural environments and promoting sustainable development.
- 2) Improving the urban-rural environment: The government has launched several projects aimed at improving the urban-rural environment, including waste management and green infrastructure development.
- 3) Enhancing the quality of urban and rural environments: Efforts to enhance the quality of urban and rural environments have led to cleaner air and water, as well as increased access to green spaces for residents.
- 4) Optimizing urban and rural environmental conditions: By optimizing urban and rural environmental conditions, we can create healthier and more livable communities for all residents.
- 5) Promoting urban-rural environmental improvement: Collaboration between government and NGOs is essential for promoting urban-rural environmental improvement and addressing key challenges such as pollution and resource depletion.
- 6) Fostering urban and rural environmental improvement: Fostering urban and rural environmental improvement requires long-term planning and investment in sustainable infrastructure and practices.
- 7) Advancing urban and rural environmental sustainability: Advancing urban and rural environmental sustainability involves implementing policies and practices that minimize resource consumption and reduce environmental impacts.
- 8) Safeguarding urban and rural environmental health: Safeguarding urban and rural environmental health requires proactive measures to address pollution, protect natural habitats, and promote sustainable development.
- 9) Uplifting urban and rural environmental standards: By uplifting urban and rural environmental standards, we can create healthier living environments and enhance the overall quality of life for residents.
- 10) Ensuring urban and rural environmental well-being: It is essential to prioritize initiatives aimed at ensuring urban and rural environmental well-being to address pressing environmental challenges and foster sustainable development.

2. 促进资源回收利用:

- 1) Promoting resource recycling and utilization: Implementing education programs is crucial for promoting resource recycling and utilization in communities.
- 2) Advancing resource reuse and recycling: Companies are investing in advanced technologies to advance resource reuse and recycling in their production processes.
- 3) Facilitating resource recovery and reuse: Municipalities are implementing policies aimed at facilitating resource recovery and reuse to reduce waste generation and promote sustainability.

- 4) Encouraging resource reclamation and reuse: Government incentives are encouraging industries to invest in resource reclamation and reuse to reduce their environmental footprint.
- 5) Fostering resource recycling and recovery: Collaborative efforts between governments and industries are fostering resource recycling and recovery initiatives to conserve natural resources and reduce waste.
- 6) Stimulating resource repurposing and recycling: Innovative startups are stimulating resource repurposing and recycling by transforming waste materials into valuable products.
- 7) Promoting resource recovery and reutilization: Communities are promoting resource recovery and reutilization through initiatives such as composting and organic waste recycling programs.
- 8) Encouraging resource regeneration and reuse: Sustainable design practices are encouraging resource regeneration and reuse in urban development projects to minimize environmental impacts.
- 9) Driving resource recycling and repurposing: Consumer awareness campaigns are driving resource recycling and repurposing efforts, leading to increased participation in recycling programs.
- 10) Supporting resource rehabilitation and reuse: NGOs are supporting resource rehabilitation and reuse projects in marginalized communities to improve livelihoods and environmental sustainability.

3. 提高城镇化质量:

- 1) Enhancing the quality of urbanization: Investing in infrastructure and public services is essential for enhancing the quality of urbanization and ensuring sustainable urban development.
- 2) Improving the urbanization quality: The government is implementing policies aimed at improving the urbanization quality by promoting mixed-use development and preserving green spaces.
- 3) Elevating the standard of urbanization: Sustainable transportation systems are key to elevating the standard of urbanization and reducing traffic congestion in cities.
- 4) Enhancing the urbanization level: Comprehensive urban planning is necessary for enhancing the urbanization level and creating livable cities for residents.
- 5) Raising the level of urbanization quality: Inclusive housing policies are essential for raising the level of urbanization quality and ensuring affordable housing for all urban residents.
- 6) Advancing urbanization quality: Innovation in urban design and architecture is advancing urbanization quality by creating more efficient and resilient cities.
- 7) Improving the quality of urban living: Access to healthcare and education facilities is crucial for improving the quality of urban living and promoting social inclusion in cities.
- 8) Fostering high-quality urbanization: Green building standards are fostering high-quality urbanization by promoting energy-efficient and environmentally friendly construction practices.
- 9) Enhancing the standard of urban development: Community engagement is essential for enhancing the standard of urban development and ensuring that urbanization meets the needs of all residents.
- 10) Ensuring high-quality urbanization outcomes: Effective land-use planning is necessary for ensuring high-quality urbanization outcomes and preventing urban sprawl.

请结合上面的词句进行翻译, 并誊抄在下方的横线上: _____

句子 3: 垃圾分类是处置垃圾的首要环节, 是解决垃圾出路问题的一个重要举措。

1. 首要环节:

- 1) Primary phase: The primary phase of the project involves conducting market research to understand consumer preferences.
- 2) Key stage: Training employees is a key stage in the success of any company.
- 3) Foremost step: Conducting a thorough needs assessment is the foremost step in designing an effective intervention program.
- 4) Critical juncture: Negotiating the terms of the contract is a critical juncture in the business partnership.
- 5) Pivotal point: Implementing sustainable practices at this pivotal point will determine the future of our planet.
- 6) Primary focus: Our primary focus should be on improving customer satisfaction to enhance brand loyalty.
- 7) Fundamental aspect: Understanding cultural differences is a fundamental aspect of international business negotiations.
- 8) Essential element: Effective communication is an essential element in building strong relationships with clients.
- 9) Central factor: Access to quality education is a central factor in promoting socio-economic development.
- 10) Crucial component: Community involvement is a crucial component of successful urban revitalization projects.

2. 垃圾出路问题:

- 1) Waste disposal issue: The city is facing a waste disposal issue due to the lack of proper recycling facilities.
- 2) Garbage disposal problem: The garbage disposal problem in rural areas has led to environmental pollution and health hazards.
- 3) Waste management challenge: Developing effective waste management strategies is a significant challenge for urban planners.
- 4) Trash disposal dilemma: The trash disposal dilemma in densely populated areas requires innovative solutions to minimize environmental impact.
- 5) Rubbish disposal concern: The increasing volume of waste poses a serious rubbish disposal concern for municipal authorities.
- 6) Solid waste disposal issue: The solid waste disposal issue has become a pressing concern for communities across the region.
- 7) Litter disposal problem: Educating the public about responsible litter disposal is crucial to address the litter disposal problem in parks and public spaces.
- 8) Trash handling challenge: Efficiently managing waste collection and disposal presents a significant trash handling challenge for municipalities.
- 9) Waste treatment issue: The waste treatment issue requires investment in modern facilities to ensure safe and environmentally friendly disposal methods.
- 10) Refuse management dilemma: Finding a sustainable solution to the refuse management dilemma requires collaboration between government and private sectors.

请结合上面的词句进行翻译, 并誊抄在下方的横线上: _____

句子4: 垃圾分类是按照垃圾的不同成分、利用价值以及对环境的影响, 根据不同处置方式的要求, 分成若干种类, 进行分类投放, 并通过分类收集, 分类运输, 分类处理, 实现垃圾减量化, 资源化, 无害化。

1. 垃圾分类是按照垃圾的不同成分、利用价值以及对环境的影响:

- 1) Waste sorting is based on the different components, utilization value, and environmental impact of the garbage.
- 2) Garbage segregation is determined by the varied composition, utility, and environmental implications of the waste.
- 3) Waste categorization takes into account the diverse composition, resource potential, and environmental implications of the waste.
- 4) Sorting waste involves considering the distinct components, value for utilization, and environmental ramifications of the garbage.
- 5) The classification of waste is determined by its varied composition, potential for reuse, and environmental impact.
- 6) Waste segregation entails evaluating the diverse composition, potential utility, and environmental effects of the waste materials.
- 7) Garbage sorting is guided by the varied composition, potential usefulness, and environmental consequences of the waste.
- 8) The categorization of waste involves assessing the different components, potential for recycling, and environmental impact of the waste.
- 9) Sorting garbage entails considering the diverse composition, potential for recovery, and environmental implications of the waste.
- 10) Waste separation is based on the diverse composition, potential for utilization, and environmental impact of the waste.

2. 根据不同处置方式的要求, 分成若干种类:

- 1) According to the requirements of different disposal methods, it is divided into several categories.
- 2) It is classified into several categories based on the requirements of various disposal methods.
- 3) Depending on the demands of different disposal methods, it is categorized into several types.
- 4) It is sorted into various categories according to the requirements of diverse disposal methods.
- 5) Based on the specifications of different disposal methods, it is segmented into multiple classifications.
- 6) Categorization into several types is done in accordance with the specifications of various disposal methods.
- 7) It is divided into several categories, each complying with different disposal methods.
- 8) Various classifications are established according to the demands of different disposal methods.
- 9) It is sorted into multiple categories, each corresponding to different disposal methods.
- 10) Depending on the criteria of different disposal methods, it is organized into several classes.

3. 通过分类收集、分类运输、分类处理:

- 1) Through segregated collection, transportation, and processing.

- 2) By collecting, transporting, and processing separately.
- 3) Through the collection, transportation, and treatment of segregated waste.
- 4) By segregating waste during collection, transportation, and processing.
- 5) Through the segregated collection, transportation, and disposal of waste.
- 6) By collecting, transporting, and treating waste in separate streams.
- 7) Through the sorting, transportation, and treatment of segregated waste.
- 8) By segregating waste at the point of collection, during transportation, and during processing.
- 9) Through separate collection, transportation, and disposal procedures.
- 10) By implementing separate systems for collection, transportation, and processing of waste.

4. 实现垃圾减量化、资源化、无害化:

- 1) Achieving waste reduction, resource recovery, and harmlessness.
- 2) Realizing waste minimization, resource utilization, and harm mitigation.
- 3) Attaining waste reduction, resource reuse, and environmental safety.
- 4) Accomplishing waste minimization, resource recovery, and environmental harm reduction.
- 5) Achieving waste reduction, resource recycling, and environmental benignity.
- 6) Realizing waste reduction, resource valorization, and environmental sustainability.
- 7) Accomplishing waste reduction, resource reclamation, and environmental safety.
- 8) Achieving waste minimization, resource regeneration, and environmental non-toxicity.
- 9) Realizing waste reduction, resource repurposing, and environmental protection.
- 10) Accomplishing waste minimization, resource recovery, and environmental health.

请结合上面的词句进行翻译, 并誊抄在下方的横线上: _____

二、整合翻译:

将你翻译的四个句子加上连词, 进行组装整合, 在使用“ChatGPT”或者“有道词典的批改功能”修缮以后, 誊抄在下方: _____

三、独立练习:

2022 年 11 月 CATTI 三级笔译实务真题（汉译英）后半部分

首先,充分回收利用可回收物。通过分类投放,分类收集,把有用物品,如纸张、塑料、橡胶、玻璃等从垃圾中分离出来利用。如 1 吨废纸可再生新纸 0.8 吨,相当于少砍伐树龄为 30 年的树木 20 棵。

其次,减少垃圾处理量。分类收集便于对不同垃圾进行分类处置。例如果皮转化为有机肥。其他垃圾则进行卫生填埋或焚烧,可减少填埋量。从而节省宝贵的土地资源,,实现社会效益和生态环境的双赢。

再者,如果我们不对生活垃圾进行分类,将增加后续处理难度,可造成对空气,水质,土壤的污染,危害人体健康,损害环境。总之,垃圾分类既能提高垃圾利用水平,又能减少垃圾处理量,达到回收可用资源,降低处置成本,减少土地消耗的目标,实现社会,经济,生态三方面的效益。

English

四、参考译文：全篇文章

前半部分:

With the increasing consumption levels driven by economic and social advancements, China has witnessed a surge in household waste and notable environmental risks, which pose challenges to new urbanization efforts. The introduction of waste sorting has proven effective in enhancing both urban and rural environments, promoting resource recycling, and improving the quality of urbanization.

As a fundamental aspect of waste management, waste sorting plays a crucial role in determining the appropriate disposal methods for different types of waste. Waste sorting involves categorizing waste based on its composition, recyclability, and environmental impact. Various disposal methods necessitate organized collection, transportation, and treatment processes to facilitate further waste reduction, resource recovery, and environmental harm mitigation.

后半部分:

Firstly, recyclable materials should be fully utilized. Valuable waste such as paper, plastics, rubber, and glass should be separated for recycling through organized delivery and collection. For every ton of waste paper recycled, 0.8 tons of virgin paper are regenerated, thus saving the equivalent of twenty 30-year-old trees.

Secondly, the volume of waste disposal needs to be minimized. Organized collection facilitates the targeted treatment of different types of waste. For instance, fruit peels can be converted into organic fertilizer. This reduces the amount of waste sent to landfills, as they are directed to sanitary landfills or incineration, consequently conserving valuable land resources and yielding social and ecological benefits.

Lastly, without a waste sorting system, subsequent treatment becomes more challenging, resulting in air, water, and soil pollution, as well as posing risks to human health and the environment. In conclusion, waste sorting not only enhances waste utilization but also reduces waste disposal volumes. It achieves the goal of recycling available resources, lowering disposal expenses and land usage, while also realizing social, economic, and ecological advantages.
